

# Presentation machine

especially for lightning talks

Ondřej Caletka

June 15, 2019

Lightning talk is either good or short.

Lightning talk is either good or short.

Setting up the projector for more than a minute  
is always just boring.

# Why do people connect their own equipment?

- they use some obscure presentation format (Keynote, Prezi, TPP)
  - please, don't; just export a PDF.
- they depend on presenter's notes and next slide preview
  - something can be done about that
- they need to show a live demo of something that lives on their laptop
  - there's no help for them

# Why do people connect their own equipment?

- they use some obscure presentation format (Keynote, Prezi, TPP)
  - please, don't; just export a PDF.
- they depend on presenter's notes and next slide preview
  - something can be done about that
- they need to show a live demo of something that lives on their laptop
  - there's no help for them
- there is **no dedicated presentation laptop available**

# Presentation laptop challenges

# Presentation laptop idea

- use pdfpc for presenting PDFs with presenter's view, notes and time limit
- allow presenters to **upload their slides** via a web-based interface
- allow organizers to run the correct presentation remotely
- shows **event agenda** when no slideshow is running
- runs from a **Live-USB drive** on any PC

QUESTIONS?

Thank you for your attention.

# It does not exist yet

- the presentation core (pdfpc) is there
- everything else can be solved by a web app hosted on the laptop

Anybody up for the idea? Any volunteer to program it?

Thank you!
